

Flexbox Defense

Use `flex-direction` and either `justify-content` or `align-items` to move your towers into position.

```
1 .tower-group-1 {
2   display: flex;
3   flex-direction: column;
4   justify-content: space-between;
5 }
6
7
8 .tower-group-2 {
9   display: flex;
10  flex-direction: column;
11  justify-content: space-between;
12  align-items: center;
13 }
14
```

☒ hide tower inputs

Start Wave

.tower-group-2
